Flat Screen vs Flat Panel

For additional information please visit Dell's Flat Panel Display Info Center: [The Dell Flat Panel Display Info Center](#)

¹ Integrated graphics will not support Digital Visual Interface (DVI). To enable DVI, OptiPlex GX280 and Dell Precision systems must be configured with a discrete graphics card option that includes DVI support or a DVI add in card. DVI is not supported on the OptiPlex 170L. To support dual DVI displays, systems must be configured with a discrete graphics card option that supports dual DVI.

² To enable the display rotation feature a drive needs to be downloaded from www.support.dell.com. Not all video cards will support this feature, please check with the video card specifications in the Video Card section to see if the card will support the Display rotation feature.
