

RICHLAND ONE

Updating Wireless Network on Richland One Windows Devices

October 25, 2023

Attention Richland One Staff and Students

The District will have three (3) production wireless networks available once the update is complete. At this time, the district is only updating the RichlandOne Wi-Fi network that is used to connect district issued laptops.

- ✓ **RichlandOne**
- ✓ R1_StaffLink
- ✓ R1_Visitors (School/Site Name)

All District issued laptops must use the new RichlandOne wireless network.

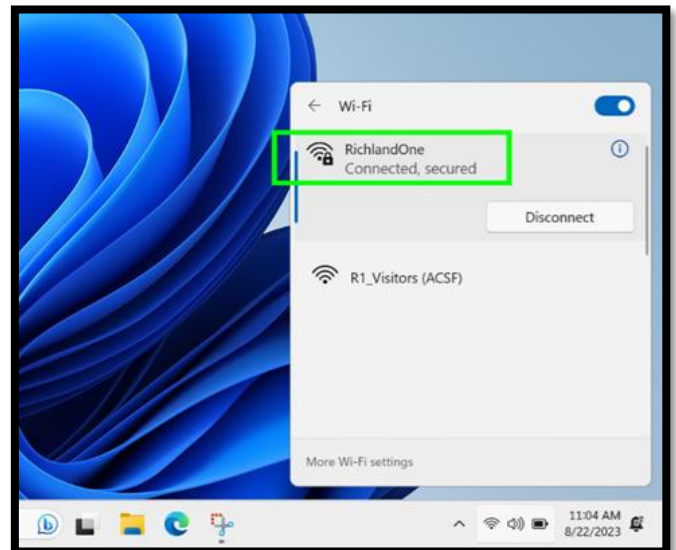

Please note: Properly configured Microsoft Windows devices issued by the District should connect automatically to the new RichlandOne network. If this does not happen, please call the Helpdesk to get your local technician to come update your device.

How to verify connectivity for District issued Microsoft Windows laptops:

IMPORTANT:

Make sure your Wi-Fi is enabled and check to see if your district issued Microsoft Windows laptop automatically connected to the **RichlandOne** network.

These updated settings are pushed to properly configured Windows laptops through the network and **may require a reboot for the settings to fully apply.**

****Note****

Properly configured Microsoft Windows laptop computers issued by the Richland One IT Department will join this network without being prompted for any further credentials. If you are experiencing issues connecting, please contact the Richland One Helpdesk at **80000** or **(803) 231-7436** for further assistance.
