

## Web Design E-Learning

### Week of March 30 – April 3:

**Goal for Week:** To understand how to create navigation bars using Bootstrap framework

**Main Standard Covered:** Use a variety of HTML elements to create webpages (Constructing Websites: HTML #5)

**To-Do List:**

1. Complete the "Bootstrap\_Grid" document which can be found inside this assignment in Teams. This should refresh your memory on what we were working on before we left. Submit this completed document to the assignment on Teams.
2. Log into CodeHS.com (if you cannot remember your username or password then email Coach Weigle)
3. Navigate to the Bootstrap Unit (unit 7) that we were working on before we left
4. Complete all of section 7.7: Navigation Bars (skip 7.7.12)
5. Answer the following discussion questions on the "Navigation Bar" Channel in Teams
  - a. Why is a navbar such an important part of a website?
  - b. What kind of information should be in the navbar?

So to recap...

Before the end of the day on Friday, April 3, I need you to complete and submit the refresher Word document, complete the navigation bar section on CodeHS, and answer the discussion questions on Teams. I have upgraded to the Pro edition of CodeHS, so it's much easier for me to track your progress now 😊 These will be your first grades of Q4, so let's make sure we get off on the right foot! Miss all of you very much. Stay safe and well.

Coach Weigle
