## Dogs in the Park

Once upon a time a dog was at the playground. There was a dog who was running around the playground. A girl found the ant!

By: Claudia Halford

## Mrs. Ferrell's Wonderful Writers

I run fast. I walk fast. I wish I could go in space. And I like dresses.

By Reagan Hernandez

Go to the table. Take the table. Do work. The bear goes in the kitchen.

By: Clara Goffi

The duck went to the park. The duck saw his friends. His friend's name was ring, sock and frog. They went to play.

By: Sydnie Krauss

## 5 Kingdoms

By: Jackson Swanson

I thought the five kingdoms were five kings and queens but I'm completely wrong! It is the five classes of animals and I'm going to talk about them.

### Bacteria:

Bacteria is the oldest single celled organization such as amoebas and other types of organisms. Bacteria also doesn't have very much molecular structure.

### Protists:

Protists are sort of like building blocks of life along with bacteria. Protists have much more molecular structure let alone more of a variety of things that are made out of the bacteria.

### Fungi:

Fungi is my favorite class because it is the most interesting. Fungi are mushrooms, yeast and mold. Mushroom roots are called missielea. They help trees communicate over a long range.

### Plants:

Plants breathe the exact opposite way we do. They breathe in carbon dioxide and breathe out oxygen. They have some sort of bacteria that is responsible for the plant's green color.

### Animals:

Animals are some of the largest living things and are complex, like humans, elephants, fish, lizards and other types of living things.

## The Beatles

By: Liam Allen

*I was swinging in the part when my friend started singing. Then, crickets and frogs started a beat. I said, "What are you doing?" He didn't answer. The trees went, "bum-bum-bum". The rocks went, "boo-boo-boo". The clouds went, "la, la, la". Then, the Beatles came out and sang, "Hey Jude!"*
