

Igniting imagination and innovation through learning.

## Force Vectors

## Vectors

Vector Quantities
Have both a magnitude and direction
Examples: Position, force, moment

Vector Notation
Vectors are given a variable, such as $A$ or $B$
Handwritten notation usually includes an arrow, such as $\vec{A}$ or $\vec{B}$

## Illustrating Vectors

Vectors are represented by arrows. Include magnitude, direction, and sense.

Magnitude: The length of the line segment Magnitude $=3$

## Illustrating Vectors

Vectors are represented by arrows.
Include magnitude, direction, and sense
Direction: The angle between a reference axis and the arrow's line of action.

Direction $=\underline{\mathbf{3 0}^{\circ}}$ counterclockwise from the positive X axis.
+X

## Illustrating Vectors

Vectors are represented by arrows
Include magnitude, direction, and sense
Sense: Indicated by the direction of the tip of the arrow.

Sense = Upward and to the right.

## Sense

## Trigonometry Review

Right Triangle
A triangle with a $\underline{90^{\circ}}$ angle.
Sum of all interior angles $=\underline{180^{\circ}}$ Pythagorean Theorem: $\mathbf{A}^{\mathbf{2}+B^{2}=C^{2}}$

## Trigonometry Review

Trigonometric Functions soh cah toa $\sin \theta^{\circ}=\mathbf{o p p} /$ hyp $\cos \theta^{\circ}=$ adj $/ \mathrm{hyp}$ $\tan \theta^{\circ}=\underline{\text { opp } / \mathbf{a d j}}$

Opposite Side (opp)

## Trigonometry Application

The hypotenuse is the Magnitude of the Force, F.
The adjacent side is the x-component, $F_{x}$.
The opposite side is the $y$-component, $F_{y}$.

Adjacent Side $\mathrm{F}_{\mathrm{X}}$

## Trigonometry Application

$\sin \theta^{\circ}=F_{y} / F^{\ldots} \ldots \ldots \ldots \ldots F_{y}=F \sin \theta^{\circ}$
$\cos \theta^{\circ}=F_{x} / F$

$$
F_{x}=F \cos \theta^{\circ}
$$

$\tan \theta^{\circ}=F_{y} / F_{x}$

Opposite Side

Adjacent Side $\mathrm{F}_{\mathrm{x}}$

## Vector $X$ and $Y$ Components

Vector $\vec{A}$
Magnitude $=75.0 \mathrm{lb}$
Direction $=35.0^{\circ}$ from the horizontal

## Vector X and Y Components

## Solve for $F_{A X}$

$$
\cos \theta=\frac{a d j}{h y p}
$$

$\cos \theta=\frac{F_{\text {cx }}}{\vec{A}}$

$$
\cos 35.0^{\circ}=\frac{F_{A X}}{75.0 l b}
$$

## Vector X and Y Components

## Solve for $F_{A Y}$

$$
\sin \theta=\frac{o p p}{h y p} \quad \sin \theta=\frac{F_{\Delta v}}{\vec{A}} \quad \sin 35.0^{\circ}=\frac{F_{A Y}}{75.0 l b}
$$

## Vector X and Y Components - Your Turn

Vector $\vec{B}$
Magnitude $=75.0 \mathrm{lb}$
Direction $=35.0^{\circ}$ from the horizontal
$-\mathrm{C}$

## Vector X and Y Components - Your Turn

## Solve for $F_{B X}$

$$
\cos \theta=\frac{a d j}{h y p}
$$

$$
\cos \theta=\frac{F_{B X}}{\vec{B}}
$$

$$
\cos 35.0^{\circ}=\frac{F_{B X}}{75.0 \mathrm{lb}}
$$

$$
F_{B X}=75.0 \mathrm{lb} \cos 35.0^{\circ}
$$

$$
F_{B X}=61.4 l b
$$

## Vector X and Y Components - Your Turn

Solve for $F_{B Y}$
$\sin \theta=\frac{o p p}{h y p}$
$\sin \theta^{\circ}=\frac{-F_{B y}}{\vec{B}}$ $\sin 35.0^{\circ}=\frac{-F_{B y}}{75.0 \mathrm{lb}}$ $F_{B y}=-75.0 \mathrm{lb} \sin 35.0^{\circ}$

$$
F_{B y}=-43.0 \mathrm{lb}
$$

## Resultant Force

Two people are pulling a boat to shore. They are pulling with the same magnitude.

## Resultant Force

List the forces according to sense.

Label right and up forces as positive, and label left and down forces as negative.

$$
\theta=35^{\circ} \quad F_{A x}=61.4 \mathrm{lb}
$$

$$
\begin{gathered}
\mathrm{F}_{\mathrm{x}} \\
\mathrm{~F}_{\mathrm{Ax}}=+61.4 \mathrm{lb} \\
\mathrm{~F}_{\mathrm{Bx}}=+61.4 \mathrm{lb} \\
\mathrm{~F}_{\mathrm{y}} \\
\mathrm{~F}_{\mathrm{Ay}}=+43.0 \mathrm{lb} \\
\mathrm{~F}_{\mathrm{By}}=-43.0 \mathrm{lb}
\end{gathered}
$$

## Resultant Force

$$
\begin{gathered}
\mathrm{F}_{\mathrm{x}} \\
\mathrm{~F}_{\mathrm{Ax}}=+61.4 \mathrm{lb} \\
\mathrm{~F}_{\mathrm{Bx}}=+61.4 \mathrm{lb} \\
\mathrm{~F}_{\mathrm{y}} \\
\mathrm{~F}_{\mathrm{Ay}}=+43.0 \mathrm{lb} \\
\mathrm{~F}_{\mathrm{By}}=-43.0 \mathrm{lb}
\end{gathered}
$$

Sum ( $\Sigma$ ) the forces
$\Sigma F_{x}=F_{A x}+F_{B x}$
$\sum F_{x}=61.4 \underline{36} \mathrm{lb}+61.4 \underline{36} \mathrm{lb}$
$\Sigma \mathrm{F}_{\mathrm{x}}=122.9 \mathrm{lb}$ (right)
$\Sigma F_{y}=F_{A y}+F_{B y}$
$\Sigma F_{y}=43.0 \underline{18} \mathrm{lb}+(-43.0 \underline{18} \mathrm{lb})=0$

Magnitude is $\underline{122.9 \mathrm{lb} .}$
Direction is $\underline{0}^{\circ}$ from the x axis
Sense is right.

## Resultant Force

## Draw the resultant force $\left(F_{R}\right)$

 Magnitude is 123 lbDirection is $0^{\circ}$ from the $x$ axis

## Resultant Force

## Resultant Force

Find the x and y components of vector C .

$$
\begin{aligned}
& \mathrm{F}_{\mathrm{Cx}}=300 . \mathrm{lb} \cos 60 .^{\circ} \\
& \mathrm{F}_{\mathrm{Cx}}=\underline{\mathbf{1 5 0} \mathbf{\mathrm { lb }}} \\
& \mathrm{F}_{\mathrm{Cy}}=300 . \mathrm{lb} \sin 60 .^{\circ} \\
& \mathrm{F}_{\mathrm{Cy}}=\underline{\mathbf{2 6 0} \mathbf{l b}}
\end{aligned}
$$

## Resultant Force

Find the x and y components of vector D .

$$
\begin{aligned}
& \mathrm{F}_{\mathrm{Dx}}=400 \mathrm{lb} \cos 30 .^{\circ} \\
& \mathrm{F}_{\mathrm{Dx}}=\underline{\mathbf{3 5 0} \mathrm{lb}} \\
& \mathrm{~F}_{\mathrm{Dy}}=-400 \mathrm{lb} \sin 30 .^{\circ} \\
& \mathrm{F}_{\mathrm{Dy}}=\underline{-200 \mathrm{lb}}
\end{aligned}
$$

## Resultant Force

List the forces according to sense.

$$
\mathrm{F}_{\mathrm{Cy}}=25 \underline{9.8} \mathrm{lb} \quad \vec{C}=300 \mathrm{lb}
$$

Label right and up forces as positive, and label left and down forces as negative.

$$
\begin{gathered}
F_{x} \\
F_{C x}=+15 \underline{0.0} \mathrm{lb} \\
F_{D x}=+34 \underline{6.4} \mathrm{lb} \\
F_{y} \\
F_{C y}=+25 \underline{9.8} \mathrm{lb} \\
F_{D y}=-20 \underline{0.0} \mathrm{lb}
\end{gathered}
$$

## Resultant Force

## Sum ( $\Sigma$ ) the forces

$$
\begin{array}{c|l}
F_{x} & \\
F_{C x}=+15 \underline{0.0} \mathrm{lb} & \sum F_{x}=F_{C x}+F_{D x} \\
F_{D x}=+34 \underline{6.4} \mathrm{lb} & \sum F_{x}=15 \underline{0.0} \mathrm{lb}+34 \underline{6.4} \mathrm{lb}=49 \underline{6.4} \mathrm{lb} \text { (right) } \\
F_{Y} & \\
F_{C y}=+25 \underline{9.8} \mathrm{lb} & \sum F_{y}=F_{C y}+F_{D y} \\
F_{D y}=-20 \underline{0.0} \mathrm{lb} & \sum F_{y}=25 \underline{9.8} \mathrm{lb}+(-20 \underline{0.0} \mathrm{lb})=5 \underline{9.8} \mathrm{lb} \text { (up) }
\end{array}
$$

Sense is right and up.

## Resultant Force

Draw the $x$ and $y$ components of the resultant force.

$$
\Sigma F_{x}=49 \underline{6.4} \mathrm{lb} \text { (right) } \quad \Sigma F_{y}=5 \underline{9.8} \text { (up) }
$$

Two ways to draw the X and Y components

496.4 lb
496.4 lb

## Resultant Force

## Solve for magnitude.

$F_{R}$

$$
a^{2}+b^{2}=c^{2}
$$

496.4 lb

$$
\begin{aligned}
& (5 \underline{9.8} \mathrm{lb})^{2}+(49 \underline{6.4} \mathrm{lb})^{2}=\mathrm{F}_{\mathrm{R}}{ }^{2} \\
& \sqrt{\left(59.8 l b^{2}\right)+\left(496.4 l b^{2}\right)}=F_{R}
\end{aligned}
$$

$$
\mathrm{F}_{\mathrm{R}}=50 \underline{0} \mathrm{lb} \text { or } 5.0 \times 10^{2} \mathrm{lb}
$$

Magnitude is $5.0 \times 10^{2} \mathrm{lb}(500 \mathrm{lbs})$

## Resultant Force

## Solve for direction.

$$
\tan \theta=\frac{o p p}{a d j}
$$

$$
\theta=7^{\circ}
$$

Direction is $7^{\circ}$ counterclockwise from the positive $X$ axis.

$$
\begin{aligned}
& \tan \theta=\frac{59.8 \not \boxed{ } \nmid \nmid}{496.4 \not b} \\
& \theta=\tan ^{-1}\left(\frac{59.8}{496.4}\right)
\end{aligned}
$$

## Resultant Force

## Draw the resultant force $\left(F_{R}\right)$

Magnitude is 500 lb .
Direction is $7^{\circ}$ counterclockwise from the positive $x$ axis.

Sense is right and up.
500 lb
